

Python Refresher 3

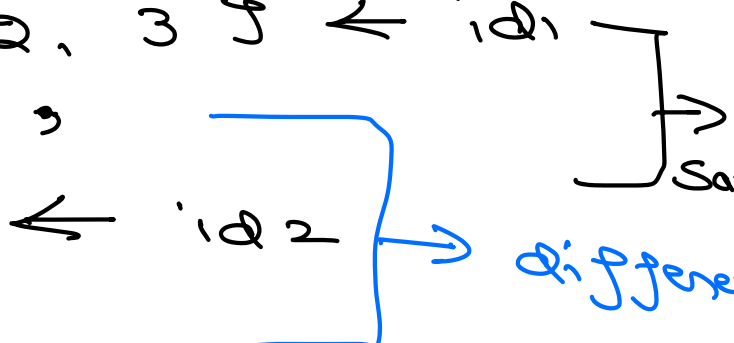

Topics for today:

- Data Structure Revision
- Quizzes
- Comprehensions
- Packing and unpacking
- Strings
- String formatting

List

- Mutable
- Heterogeneous
- Dynamic

$L1 \Rightarrow [1, 2, 3] \leftarrow id_1$
 $L1[0] = 'a'$
 $id(L1) \leftarrow id_2$
 $id(L1[0])$

Same
different

Tuples

- Same as List but immutable
- Memory efficient and fast

To do

Set

- ⇒ Unique collection (No Dups)
- ⇒ Insertion Ordered
- ⇒ Heterogeneous
- ⇒ Can only contain immutables

Set operations

- * Intersection $\Rightarrow \{1\}$
- * Union $\Rightarrow \{1, 2, 3, 4\}$
- * Difference $\Rightarrow \{2\}$ ($A - B$)
- * Symmetric diff $\Rightarrow (A \cup B) - (A \cap B)$

Set operations

Intersection

Q What does Unhashable?

Dictionary

- K: v pair
- K → can only be 'immutable'
- V → No restriction
- Insertion Order
- Dynamic and mutable

13

Set, dict $\Rightarrow O(1)$
List, tuple, strings $\Rightarrow O(n)$

Packing and unpacking
list1 = [1, 2, 3]

a = list1[0]

b = list1[1]

c = list1[2]

* Unpacking

a, b, c = list1

* Packing

a = 1

b = 2

c = 3

data = a, b, c

↓

(1, 2, 3)

Strings

→ immutable

→ iterable

→ ordered ⇒ you can index
and slice

file1.py

Q = 10

def func1()

Q = 30

def func2()

Q = 20

← Global Variable

Local Variables

Explain mutable
